

The Department of Health has revealed that, concerning the situation of the epidemic of COVID-in factories, infected people are still found in many areas. Therefore, the Ministry of Industry, in cooperation with the Ministry of Labor, Ministry of Interior, and Ministry of Public Health, has established four main measures to control the spread of the disease, as follows: (1) measures for disease prevention, such as organizing hand-washing spots; (2) environmental health measures, such as cleaning and waste management; (3) auxiliary measures for medium-sized and large factories; at large factories, strict screening of workers and visitors is required; and (4) measures to take when an infected person is found.
